

CLIENT CASE STUDY

Client Name:

Dina *

Age:

32 Years

Country:

Spain

Time Trying to Conceive (TTC):

2 Years

Case History Summary:

- High FSH

Natural Treatment Summary:

Dina has been trying to get pregnant for over a year without any luck. She went to have a check up and it turned out that her FSH was very high for her age. Naturally she got worried as the thought of IVF and potentially donor eggs was not very appealing. Dina found out about us on Dr. Mercola's site and joined the program. It turned out that Dina worked with chemicals every day and apart from gloves had no other protection. She was inhaling toxic fumes pretty much all day long. She made the recommended changes as well as changed her and her partner's diet and lifestyle as much as possible. She took the supplements recommended in the program and started timing her intercourse.

Length of Treatment:

6 Months

Clinical Outcome:

Six months after starting the program, she got pregnant and sent me an ecstatic email. She was so worried that she would need to use IVF, which she could not afford. The good news offered a huge relief for her. She gave birth to a beautiful baby girl.
